ALIGNMENTS

ö cell The present invention relates to a method for modulating the oxidative stress level in a cell or a patient, comprising contacting the cell with, or administering to the patient, an oxidative stress regulator selected from colostrinin, or its constituent peptide (e.g. the present peptide), to change the level of an oxidising species in the cell. The method can be used to treat oxidative damage to skin, by decreasing or preventing an increase in the level of damage to a biomolecule of the patient Modulating oxidative stress level in a cell, involves contacting the with an oxidative stress regulator selected from colostrinin, its constituent peptide, analog or their combinations.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and to promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention comprises a method for promoting cell differentiation (e.g. neural cell differentiation). The method involves contacting cells with a mernal cell regulator (i.e. a colostrinin peptide) in order to change the cells in morphology to form neural cells. Colostrinin is a proline-rich polypeptide aggregate that is present in colostrum. The method of the
                                                                               Use of colostrinin, its constituent peptide or analog as a neural cell regulator, for promoting neural cell differentiation and treating damaged neural cells in a patient.
                                                                                                                                                                                  differentiation and treating damaged neural cells, using colostrinin and colostrinin constituent peptides (e.g. the present peptide) as a neural cell regulator. Colostrinin is a polypeptide complex found in colostrum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Neural cell differentiation; neural cell regulator; colostrinin peptide; neural cell formation; proline-rich polypeptide aggregate; colostrum; neural cell treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Promoting cell differentiation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or analog.

The present sequence is that of a colostrinin constituent peptide that is preferred for use as an immunological regulator and as a blood cell regulator in claimed methods of the invention. It is classified as having a beta-casein homologue precursor. Methods are claimed for: inducing a cytokine in a cell by contact with an immunological regulator, where the cort is present in a cell culture, a tissue, an organ or an organism, and cell is present in a cell culture, a tissue, an organ or an organism, and cell by contact with the immunological regulator under conditions effective to induce a cytokine, modulating an immune response in a patient by administering an immunological regulator under conditions effective to induce a cytokine, where the immunological regulator is caministered topically or as part of a dietary supplement, and where the immune response is specific or non specific, an interferon response or an antibody response; modulating blood cell proliferation by contacting consent in a cell culture or an organism, are mammalian or human, and where the blood cells are increased in number or differentiated; and a
                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Modulation of blood cell proliferation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or
invention is useful for promoting the differentiation of cells and for treating damaged neural cells in a patient. The present anino acid sequence represents a specifically claimed colostrinin peptide used in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a composition which comprises a blood cell regulator selected from colostrinin, its constituent peptide and/or analogue. The invention is used for modulating the oxidative stress level in a cell e.g. mammalian or human cell present in a cell culture, tissue, organ, or organism; or for treating oxidative damage to the skin of a patient e.g. animal or human; to modulate oxidative stress during/ after a premature birth or normal birth, preventing/delaying aging in a patient, enhancing wound healing, and the reduction of side effects of cosmetic procedures. The method changes the level of an oxidising species in the cell, such as decreases or prevents increase in the level of damage to a blood call of the patient selected from DNA, protein and/or lipid, compared to the same conditions when the oxidative stress results in regulator is not present. The modulation of oxidative stress results in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Blood cell regulator; colostrinin; constituent peptide; oxidative stress; therapy; oxidative damage; skin; aging; wound healing; cell replacement; tissue; oxgan; cosmetic procedure; repair; regeneration; preservation; transplantation; implantation; dermatological; vulnerary.
method for modulating blood cell proliferation in a patent. A claimed cytokine-inducing composition comprises a pharmaceutical carrier and an active agent such as the present peptide. Cytokines induced by this peptide in human leucocyte cultures include interferon-gamma, tumour necrosis factor-alpha, interleukin-4, interleukin-6, interleukin-10 and interleukin-12. It was one of the best overall inducers in almost all cytokine and blood cell proliferation experiments conducted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition useful for the modulation of blood cell proliferation in a patient comprises a blood cell regulator selected from colostrinin, its constituent peptide and/or analog.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes the use of a modulator selected from colostrinin, its constituent peptide, its active analogue, and a combination of these, for modulating an intracellular signaling molecule in a cell, down regulating the self of the constituent of the modulator has cytostatic activity, and can be used as a 4HNE inhibitor. The modulator is useful in the manufacture of a medicament for reducing the HNR-protein adduct formation, inhibiting 4HNE-mediated glucathione depletion, inhibiting 4HNE-induced activation of p53 protein, and/or inhibiting 4HNE-induced activation of c-Jun NH2-terminal kinases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Use of colostrinin for e.g. modulating an intracellular signaling molecule in a cell, down regulating 4HNE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, or protecting against DNA damage in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4HNE-mediated lipid peroxidation down regulation, apoptosis inhibition, DNA damage; beta-amyloid; retinoic acid; cytostatic; 4HNE inhibitor; 4HNE-protein adduct formation reduction; 4HNE-mediated glutathione depletion inhibition; p53 inhibition; c-Jun NH2-terminal kinase inhibition.
enhanced repair, regeneration, and replacement of cells, tissues and organs (e.g. kidney, liver, pancreas, skin, and the other internal and external organs), as well as enhanced preservation of such organs for transplantation, implantation, or scientific research. The present sequence is a colostrinin constituent peptide
                                                                                                                                                                       Gaps

The invention provides a method for the recovery of peptides (especially colostrinin) from colostrum in substantially pure, biologically active form and in this post of form an alcohol phase containing the colostrinin and a precipitate containing higher molecular weight caseins and other proteins. Best results are obtained using methanol or ethanol of at least 80% and preferably up to 100%, purity. The alcohol phase is then separated from the precipitate, and the colostrinin sis separated from the alcohol, preferably by evaporation, to form a colostrinin-rich phase, which is recovered. A precipitation agent, such as ammonium sulfate, may be added to induce precipitation of the colostrinin peptides. The method is generally applicable to the separation of peptides from fluids containing higher molecular weight proteins, lipids, carbohydrates and/or nucleic
                                                                                                                                        ö
Colostrinin, or its constituent peptide or active analogue is useful for inhibiting apoptosis in a cell, protecting against DNA damage in a cell, or reducing the toxic effect of beta-amyloid or retinoic acid on a cell. The present sequence represents a synthetic constituent peptide of colostrinin, which can be used as a modulator in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Recovering peptides such as colostrinin from mammalian colostrum, by mixing colostrum with alcohol to form alcohol phase containing peptides and precipitate, separating alcohol phase from precipitate, and

Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system development of a child's immune system, as a distart such as chart and viral infections, to improve the promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up characteristics. Specifically, it refers to identifying genes that are up of whom-regulated in transgenic plants overexpressing the heterodimeric EZPA/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invantion describes comparing transgenic plants for the production of growth regulators, carymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or complysiology, altered endoreduplication, biochemistry, signal cor physiology, altered mobilization and/or altered photosynthesis, cach relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or hegative selectable markers during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell can an anticopen and or carbon meterabolism or they function as transcribtion factors. This polypeptide sequence is that cress protein content in plants overexpressing invancion.
                                                                                                                                                                                                                  Altering plant characteristics, useful for producing plants for enzyme or pharmaceutical production comprises modifying in a plant, expression of one or more nucleic acids and/or modifying level or activity of one or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   pathogenic virus, alternative reading frame; antigenic determinant, virucide; vaccine; therapeutic agent; infection; HPV.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Thale cress protein upregulated in E2Fa/Dpa expressing plants SeqID 564.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-ABR2702). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plant; transgenic; E2Fa/DPa transcription factor; growth regulator; animal feed product; thale cress; cell wall biosynthesis; nitrogen metabolism; carbon metabolism.

                                                                                                                                                                                                                                                                                                         ô
                                                                                                                        This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a methionine amino acid residue, which comprises an antiganic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the

production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present sequence is that of a human papillomavirus (HPV) epitope peptide of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel polypeptide encoded by an alternative reading frame of a pathogenic virus, where the polypeptide starts with a mathionine amino acid residue, which comprises an antigenic determinant and more than 7 amino acid residues. The invention may be useful for the production of compounds with a virucide activity or the development of a vaccine. The polypeptide or its fragments may be useful as a therapeutic agent. It is also useful for the manufacture of a medicament for treating or preventing an infection with the pathogenic virus. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polypeptide encoded by an alternative reading frame of a pathogenic virus comprising an antigenic determinant, useful for treating or preventing an infection with the pathogenic virus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

US-08-718-661-2

Sequence 2, Application US/08718661

Patent No. 5876972

GENERAL INFORMATION:

TITLE OF INVENTION: tumor suppressor proteins and methods for their isolation

TITLE OF INVENTION: tumor suppressor proteins and methods for their isolation

TITLE OF INVENTION: tumor suppressor proteins and methods for their isolation

NUMBER OF SEQUENCES: 15

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-085/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30 (BPO)

CURSIFICATION NUMBER: US/08/718,661

FILING DATE:

CLASSIFICATION: 530

INFORMATION FOR SEQ ID NO: 2:

SEQUENCE CHARACTERISTICS:

LENGTH: 667 amino acids

TOPPOLOGY: linear

MOLECULE TYPE: protein

Bacteriol. 185:1018-1026(2003).

-!- CATALYTIC ACTIVITY: Hydrolysis of terminal, non-reducing beta-D-aglactores residues in beta-D-galactosides.
-!- SIMILARITY: Belongs to family 35 of glycosyl hydrolases.

                                                                                                                                                                                                                                                                                                                                                            Dev. Biol. 249:204-218(2002).

-1- FUNCTION: May be responsible for anchoring smooth muscle cells to elastic fibers, and may be involved not only in the formation of the elastic fibers, and may be involved not only in the formation of the elastic fibers, and may be involved not only in the formation of the elastic fiber, but also in the processes that regulate vessel assembly. Has cell adhesive capacity. Major component of the cochlear basilar membrane (BM) which may contribute to the developmental assembly or function of the BM.

-1- SUBUNIT: Homotrimer associated through a moderately stable interaction of the triple heltx and then a further quaternary assembly to higher order polymers via intermolecular disulfide bunds (BV similarity). Interacts with EMILINI.

-1- SUBCELLULAR LOCATION: Extracellular matrix. Found mainly at the interface between amorphous elastin and microfibrils.

-1- SUBCELLULAR LOCATION: Extracellular matrix. Found mainly at the bunds followed by modest levels in adult heart and lung, and much lower levels in forebrain, brainstem, cereballum and hypothalamus.

-1- TISSUE SPECIFICITY: Highest levels are present in cochlea of PB pups, followed by modest levels in adult heart and lung, and much lower levels in forebrain, brainstem, cereballum and hypothalamus.

-1- DEVELOPMENTAL STAGE: Low levels detected in cochlea in neonatal pups at Pl: Levels increased 2-fold by P5 and rose further to 16-fold at Pl3: Expression declined somewhat in adult mice. At E9:5, as during all stagges of development, it is strongly expressed in citerathy and in the limbbuds and the heart.

-1- SIMILARITY: Contains 1 collagenous domain.

-1- SIMILARITY: Contains 1 collagenous domain.

RESULT 1

```
The present invention relates to a method for modulating the oxidative stress level in a cell or a patient, comprising contacting the cell with, or administering to the patient, an oxidative stress regulator selected from colostrinin, or its constituent peptide (e.g. the present peptide), to change the level of an oxidating species in the cell. The method can be used to treat oxidative damage to skin, by decreasing or preventing an increase in the level of damage to a biomolecule of the patient
                                                                                                                                                                                                                                                                                                                                                                                              Modulating oxidative stress level in a cell, involves contacting the cell with an oxidative stress regulator selected from colostrinin, its constituent peptide, analog or their combinations.
                                                                                                                      Dermatological; oxidative stress regulator; colostrinin.
                                                                                                                                                                                                                                                                                                                                       Boldogh I;

Sequences AAB72246 - AAB72275 represent peptides derived from clostrinin, a proline rich polypeptide aggregate contained in colostrum. The peptides have immune response medulatory activity, and are capable of inducing cytokines. Colostrinin and its derived peptides are useful for inducing cytokines production, for medulating an immunological response and for inducing blood cell proliferation. The peptides are useful in the treatment of disorders of the central nervous system, neurological disorders of the central nervous system, neurological Alzheimer's disease, motor neurone disease, psychosis, neurosis, chronic acquired immunological deficiencies
     neurodegenerative disease; Alzheimer's disease; psychosis;
                                                                                                                                                                                                                                                                                                                                                                                  Inducing a cytokine and modulating an immune response, useful for treating central nervous system diseases and bacterial and viral infections, comprises administering colostrinin as an immunological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Neuroprotective; neural cell differentiation regulator; colostrinin;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the sequences of a number of peptides found in ewe's colostrinin. Colostrinin is the proline-rich polypeptide fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the development of a child's immune system, as a dietary supplement, and to promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises a method for promoting cell differentiation (e.g. neural cell differentiation). The method involves contacting cells with a neural cell regulator (i.e. a colostrinin peptide) in order to change the cells in morphology to form neural cells. Colostrinin is a proline-rich polypeptide aggregate that is present in colostrum. The method of the
                                                                  Use of colostrinin, its constituent peptide or analog as a neural cell regulator, for promoting neural cell differentiation and treating damaged neural cells in a patient.
                                                                                                                                    The present invention relates to a method for promoting neural cell adifferentiation and treating damaged neural cells, using colostrinin and colostrinin peptides (e.g. the present peptide) as a neural cell regulator. Colostrinin is a polypeptide complex found in colostrum

The present sequence is that of a colostrinin constituent peptide that is preferred for use as an immunological regulator and as a blood cell regulator in claimed methods of the invention. Methods are claimed for: regulator in claimed methods of the invention. Methods are claimed for: inducting a cytokine in a cell by contact with an immunological regulator, where the cell is present in a cell by contact with the immunological regulator. Conganism, and the cell is mammalian, including human; modulating an immune conditions effective to induce a cytokine; modulating an immune conditions effective to induce a cytokine, where the immunological regulator under conditions effective to induce a cytokine, where the immunological conditions effective to induce a cytokine, where the immune response is specific or non specific, an interferon cand where the immune response is specific or non specific, an interferon contacting blood cells with a blood cell regulator, where the blood cells when a cell culture or an organism, are mammalian or human, and where the blood cells are increased in number or differentiated; and a method for modulating blood cell proliferation in a patent. A claimed
                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulation of blood cell proliferation in a patient involves use of blood cell regulator selected from colostrinin, its constituent peptide and/or
invention is useful for promoting the differentiation of cells and for treating damaged neural cells in a patient. The present amino acid sequence represents a specifically claimed colostrinin peptide used in the method of the invention

The invention is used for modulating the exidative stress level in a cell e.g. mammalian or human cell present in a cell culture, tissue, organ, or organism; or for treating exidative damage to the skin of a patient e.g. animal or human; to modulate exidative stress during/ after a premature birth or normal birth, preventing/delaying aging in a patient, enhancing wound healing, and the reduction of side effects of cosmetic procedures. The method changes the level of an exidising species in the cell, such as decreases or prevents increase in the level of damage to a blomolecule of the patient selected from DNA, protein and/or illpid, compared to the same conditions when the exidative stress results in enhanced repair, regeneration, and replacement of cells, tissues and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Blood cell regulator; colostrinin; constituent peptide; oxidative stress; therapy; oxidative damage; skin; aging; wound healing; cell replacement; tissue; organ; cosmetic procedure; repair; regeneration; preservation; transplantation; implantation; dermatological; vulnerary.

cytokine-inducing composition comprises a pharmaceutical carrier and active agent such as the present peptide. Cytokines induced by this peptide in human leucocyte cultures include interferon-gamma, tumour necrosis factor-alpha, interleukin-4, interleukin-6, interleukin-10 an interleukin-12. It was one of the best overall inducers in almost all cytokine and blood cell proliferation experiments conducted

Constituent peptide of colostrinin SEQ ID NO:2.

(first entry)

29-JUL-2004

ADN60296 standard; peptide; 17 AA.

```
The present invention describes the use of a modulator selected from colostrinin, its constituent peptide, its active analogue, and a combination of these, for modulating an intracellular signaling molecule in a cell, down regulating 4HRE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, protecting against DNA damage in a cell, inhibiting apoptosis in a cell, protecting against DNA damage in a cell. The modulator has cytostatic activity, and can be used as a 44NR inhibitor. The modulator is useful in the manufacture of a medicament for reducing 4HNE-protein adduct formation, inhibiting 4HNE-mediated plutathione depletion, inhibiting 4HNE-mediated activation of c-Jun NH2-terminal kinases. Colostrinin, or its constituent peptide or active analogue is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Use of colostrinin for e.g. modulating an intracellular signaling molecule in a cell, down regulating 4HNE-mediated lipid peroxidation in a cell, inhibiting apoptosis in a cell, or protecting against DNA damage in a cell.
                                                                                                                              modulator; colostrinin; intracellular signaling molecule modulator; 4HNB-mediated lipid peroxidation down regulation; apoptosis inhibition; DNA damage; beta-amyloid; retinoic acid; cytostatic; 4HNB inhibitor; 4HNB-protein adduct formation reduction; 4HNB-mediated glucathione depletion inhibition; p53 inhibition; c-Jun NH2-terminal kinase inhibition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ξ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Kruzel

The invention provides a method for the recovery of peptides (sepecially colostrinin) from colostrum in substantially pure, biologically active form and in alcohol phase containing the colostrum with an alcohol to from an alcohol phase containing the colostrum with an alcohol to preferably up to 100%, purity. The alcohol phase is then separated from the precipitate, and the colostrinin is separated from the alcohol, preferably up to 100%, purity. The alcohol phase is then separated from the precipitate, and the colostrinin is separated from the alcohol, preferably by evaporation, to form a colostrinin-rich phase, which is preferably by evaporation of form a colostrinin-rich phase, which is cetovered. A precipitation agent, such as ammonium sulfate, may be added either to the alcohol phase or, preferably, to the colostrinin-rich phase colostrinin peptides. The method is containing higher molecular weight proteins, lipids, carbohydrates and/or nucleic acids. In an example from the invention, the antigenic profile of peptides recovered from sheep colostrum using the alcohol precipitation colostrum using the alcohol precipitation colostrum using the present sequence synthetic peptides, including a peptide having the present sequence form antigen class A-1).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the sequences of a number of peptides found in ewe's colostruin. Colostrinin is the proline-rich polypeptid fragment of colostrum. These peptides can be used in the treatment of central nervous system disorders such as senile dementia, Parkinson's disease, Alzheimer's disease, psychosis and neurosis, immune system disorders such as bacterial and viral infections, to improve the disorderpent of a child's immune system, as a dietary supplement, and promote the dissolution of beta-amyloid plaques
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

antiviral; cyclic

Synthetic.

```
The invention relates to colostrinin peptide fragments which are useful, in the treatment of chronic disorders of the immune system. Cand the central nervous system. Colostrinin peptides are used as a medicament in the treatment of neurological disorders e.g., dementia, neurodegenerative disorders e.g., Alzheimer's disease, motor neuron disease e.g., Parkinson's disease, mental disorders e.g., parkinson's disease, mental disorders e.g. psychosis and neurosis, in acquired immunological deficiencies, chronic bacterial and ral infections and diseases characterised by the presence of betal amylosing plaques and as a distary supplement for babies, small children, amylosing paginges and as distary supplement for babies, small children, have suffered from cacheary supplement for babies, small children, have suffered from cacheary or have subjected to chemotherapy or have suffered from cacheary or used as food additives and as an auxillary withdrawal treatment for drug addicts, after a period of detoxification and in persons dependent on stimulants. Colostrinin peptides are used to prepare antibodies and to treat emotional disturbances, e.g. emotional disturbances of psychiatric patients in a state of depression. These colostrinin peptides improves the immunological deficiencies in a child. The
                                                                                                         Colostrinin, nootropic; neuroprotective; immunomodulatory; antibacterial; Parkinson's disease; Alzheimer's disease; mental disorder; food additive; central nervous system disorder; neurodesgenerative disorder; weight loss; beta-amyloid plaque; psychosis; neurosis; cachexia; motor neuron disease; acquired immunological deficiency; neurological disorder; dementia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Peptide useful as an interalia in the treatment of e.g. disorders of the immune system and the central nervous system comprises ten amino-terminal amino acid sequence derived from peptides present in colostrinin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    s improves the development of immune system in a new prrect the immunological deficiencies in a child. The invention relates to colostrinin peptide fragments which are useful, inter alia, in the treatment of chronic disorders of the immune system and the central nervous system. Colostrinin peptides are used as a medicament in the treatment of neurological disorders e.g., dementia, neurodegenerative disorders e.g., larbeimer's disease, motor neuron disease e.g., Parkinson's disease, mental disorders e.g., packosis and neurosis, in acquired immunological deficiencies, chronic bacterial and curvosis, in acquired inwholave been subjected to chemotherapy or amyloid plaques and as a dietary supplement for babies, small children, adults and senile persons, who have been subjected to chemotherapy or chave suffered from cachexia or weight loss due to the chronic disease. Colostrinin peptides are also used as food additives and as an auxillary withdrawal treatment for drug addicts, after a period of detoxification and in persons dependent on stimulants. Colostrinin peptides are used to prepare antibodies and to treat emotional disturbances, e.g. emotional colostrinin peptides improves the development of immune system in a new colostrinin peptide improves the development of immune system in a new person the immunological deficiencies in a child. The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GAS (Streptococcus pyogenes), comprising one of 5481 sequences (51), given in the specification. The proteins have antibacterial and antimilammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a streptococcus in a nucleic acid encoding (I) are used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I) may be used to defermine whether a compound by Streptococcus that is prevented or treated may be monightis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                               New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Streptococcus; GAS; GBS; group B streptococcus; Streptococcus agalactiae; group A streptococcus; Streptococcus pyogenes; antibacterial; antiinflammatory; infection; vaccine; meningitis; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             53.9%; Score 48; DB 5; Length 692; 40.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention describes a new isolated nucleic acid encoding a Klebsiella pneumoniae polypeptide. Also described are: a recombinant expression vector comprising the nucleic acid, operably linked to a transcription regulatory element; and a cell comprising the recombinant expression vector. The nucleic acid is useful for preparing a vaccine composition against Klebsiella pneumoniae. This is the amino acid sequence of a Klebsiella pneumoniae polypeptide of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Streptococcus, GAS, GBS, group B streptococcus, Streptococcus agalactiae, group A streptococcus, Streptococcus pyogenes; antibacterial, antinflammatory, infection, vaccine, meningitis, gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful for

N-PSDB; ABN71390

New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.

Claim 1; Page 4179; 4525pp; English.

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus progenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN6604-ABN71236 and antibacise that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I) and may be streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be chromatography, immunoassays, and distinguishing/identifying Streptococcus proteins

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 18983, Application US/09248796A

Sequence 18983, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

FILE REFERENCE: 107196.132

CURRENT RAPLICATION NUMBER: US/09/248,796A

CURRENT RILING DATE: 1999-02-13

PRIOR APPLICATION NUMBER: US 60/074,725

PRIOR PILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 18983

LENGTH: 230
                                                                                                                                                                                                                                                                        Sequence 51159, Application US/09270767

Patent No. 6703491

GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 51159
LENGTH: 141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Length 141;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 230;
